Elements Of Data Science - F2022

Week 3: Pandas, Data Exploration and Visualization

9/21/2021

TODOs

- Practical Statistics for Data Scientists, Chapter 3 EBSCO
- An introduction to seaborn https://seaborn.pydata.org/tutorial/introduction.html
- (Optional) Data Science From Scratch, Chapter 5,6,7 EBSCO

- Complete Week 3 Quiz

- HW1 out this week, includes questions on Hypothesis Testing

TODAY

- Pandas
- Data Exploration
- Visualization

Questions?

Environment Setup

Environment Setup

In [1]:
```
import numpy as np
```

Intro to Pandas

Intro to Pandas

Pandas is an open source, BSD-licensed library providing:

- **high-performance, easy-to-use data structures** and
- **data analysis tools**

Intro to Pandas

Pandas is an open source, BSD-licensed library providing:

- **high-performance, easy-to-use data structures** and
- **data analysis tools**

In [2]:
```
# usually imported using the alias 'pd'
import pandas as pd
```

Intro to Pandas

Pandas is an open source, BSD-licensed library providing:

- **high-performance, easy-to-use data structures** and
- **data analysis tools**

In [2]:
```
# usually imported using the alias 'pd'
import pandas as pd
```

- Primary datastructures:
  - **Series**: 1D array with a flexible index
  - **Dataframe**: 2D matrix with flexible index and column names

Pandas Series

Pandas Series

- 1D array of data (any numpy datatype) plus an associated **index** array

Pandas Series

- 1D array of data (any numpy datatype) plus an associated **index** array

In [3]:
```
s = pd.Series(np.random.rand(4))
s
```

Out[3]:
```
0    0.548834
1    0.373467
2    0.911459
3    0.486270
dtype: float64
```

Pandas Series

- 1D array of data (any numpy datatype) plus an associated **index** array

In [3]:
```
s = pd.Series(np.random.rand(4))
s
```

Out[3]:
```
0    0.548834
1    0.373467
2    0.911459
3    0.486270
dtype: float64
```

In [4]:
```
# return the values of the series
s.values
```

Out[4]:
```
array([0.54883433, 0.37346697, 0.91145943, 0.48627034])
```

Pandas Series

- 1D array of data (any numpy datatype) plus an associated **index** array

In [3]:
```
s = pd.Series(np.random.rand(4))
s
```

Out[3]:
```
0    0.548834
1    0.373467
2    0.911459
3    0.486270
dtype: float64
```

In [4]:
```
# return the values of the series
s.values
```

Out[4]:
```
array([0.54883433, 0.37346697, 0.91145943, 0.48627034])
```

In [5]:
```
# return the index of the series
s.index
```

Out[5]:
```
RangeIndex(start=0, stop=4, step=1)
```

Pandas Series Cont.

Pandas Series Cont.

- index is flexible, can be anything hashable (integers, strings, ...)

Pandas Series Cont.

- index is flexible, can be anything hashable (integers, strings, ...)

In [6]:
```
# create Series from array and set index
s1 = pd.Series([1,2,3],index=['house_a',2,'house c'],name='NumRooms',dtype=float)
s1
```

Out[6]:
```
house_a    1.0
2          2.0
house c    3.0
Name: NumRooms, dtype: float64
```

Pandas Series Cont.

- index is flexible, can be anything hashable (integers, strings, ...)

In [6]:
```
# create Series from array and set index
s1 = pd.Series([1,2,3],index=['house_a',2,'house c'],name='NumRooms',dtype=float)
s1
```

Out[6]:
```
house_a    1.0
2          2.0
house c    3.0
Name: NumRooms, dtype: float64
```

In [7]:
```
s1['house_a'] # access a single value via index label
```

Out[7]:
```
1.0
```

Pandas Series Cont.

- index is flexible, can be anything hashable (integers, strings, ...)

In [6]:

Questions?

Exploratory Data Analysis

Exploratory Data Analysis

For a new set of data, would like to know:

- amount of data (rows, columns)
- range (min, max)
- counts of discrete values
- central tendencies (mean, median)
- dispersion or spread (variance, IQR)
- skew
- covariance and correlation ...

Yellowcab Dataset

- Records of Yellowcab Taxi trips from January 2017
- more info: https://www1.nyc.gov/site/tlc/about/tlc-trip-record-data.page

Loading Datasets from CSV (Comma Separated Values)

- columns separated by delimiter, eg. comma, tab (\t), pipe (|)
- one row per record, observation
- often, strings quoted
- often, first row contains column headings
- often, comment rows starting with #

Loading Datasets from CSV (Comma Separated Values)

Bivariate: Evaluating Correlation

Bivariate: Evaluating Correlation

- **Correlation:** the degree to which two variables are linearly related
- Pearson Correlation Coefficient: $\rho_{XY} = \frac{cov(X,Y)}{\sigma_X \sigma_Y}$
- Sample Correlation: $r = \frac{\sum(x_i - \bar{x})(y_i - \bar{y})}{(n-1)s_x s_y}$
- Takes values between:
  - -1 (highly negatively correlated)
  - 0 (not correlated)
  - 1 (highly positively correlated)

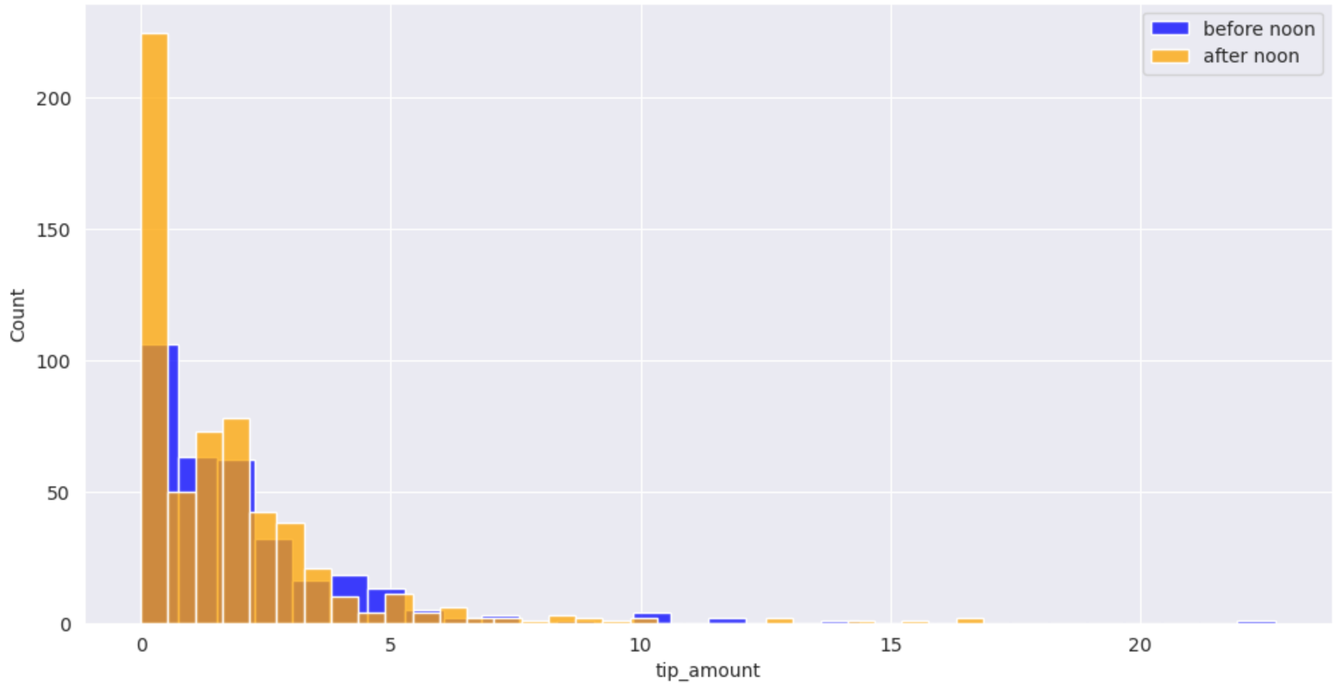
plt.legend(loc='best');
```



Data Exploration and Viz Review

- central tendencies: mean, median
- spread: variance, std deviation, IQR
- correlation: pearson correlation coefficient
- plotting with Matplotlib and Seaborn
- plotting real valued variables: histogram, scatter, regplot
- plotting categorical variables: count, bar
- plotting interactions: jointplot, pairplot

Where to go from here

- Additional Dataframe styling with `.style()` (https://pandas.pydata.org/docs/user_guide/style.html)
- Seaborn Figure-level plots: `relplot`, `displot`, `catplot` (https://seaborn.pydata.org/tutorial/function_overview.html)
- Interactive visuals with plotly (https://plotly.com/python/plotly-fundamentals/)
